pond question/kineros question
Posted by astewart - 2008/05/19 19:49

_____

Hi all,

I've discritized with releasing ponds, but there are no pond elements in the Kineros parameter file generated from that discritization. How does AGWA generate those pond elements?

Also, is the current version of Kineros on the Kineros website the same one used in AGWA? If so, what do I need to include to get the two-soil-layer infiltration option?

Thanks,
Anne
